

AGENTIC COMMERCE · PRODUCT INTRODUCTION

JourneyAX for Abercrombie & Fitch

Turn every customer goal into a completed sale.

A guided, personalized shopping journey — grounded in your real catalog.

WHY NOW

Shopping is shifting to conversation

- Buying is moving from clicking through pages to telling an assistant what you want.
 - 68% of shoppers already used an AI tool while shopping last quarter (ICSC/McKinsey)
 - 62% used AI to compare brands, prices or reviews (ICSC/McKinsey)
- Early movers set the standard — before customers' own AI agents arrive.

THE PROBLEM

High-intent shoppers, left to do the work

- Shoppers arrive knowing the occasion — not the products.
 - ~70% of carts abandoned; higher for 'what fits me' purchases (Baymard)
- Decision fatigue: dozens of items, no confidence → they leave.
 - Knowledge trapped: fit, size charts, fabric care, styling aren't in the moment of decision.

**The gap isn't demand or catalog. It's the guidance
between a customer's goal and a confident purchase.**

A&F has the demand and the catalog — what's missing is the stylist, in the moment, at scale.

A shift big enough to reprice ecommerce

- The debate has moved from 'whether' to 'how fast.'
 - McKinsey: \$3–5T global by 2030 · Bain: \$300–500B US
 - Morgan Stanley: \$190–385B US · Mordor (platforms): \$218B by 2031
- 96% of enterprises are expanding AI-agent use; 83% call it essential to compete (2026 survey).

Everyone adds a chatbot. Almost no one orchestrates the journey.

A bolted-on chatbot

- × Answers, then hands you back to the same catalog
- × Can invent products, specs and prices
- × Forgets the goal across the journey
- × Can't take a real action (outfit, quote, order)
- × No rules, no audit — a checkout liability

JourneyAX orchestration

- ✓ Carries the goal end-to-end to a sale
- ✓ Grounded in your real catalog
- ✓ Remembers context & preferences
- ✓ Takes real actions: outfit, quote, order
- ✓ Governed, rule-bound and auditable

An AI shopping advisor — a personal stylist, 24/7

- Guides customers through a conversation to the right products — and to purchase.
 - Flexible conversation · Grounded in your catalog · Governed by your rules · Multi-tenant
- Recommends real A&F products — even complete outfits — then helps the customer buy.

Flexible conversation. Controlled facts & actions.

- The model owns the conversation. Your systems own products, prices, stock and rules.
 - Every product and price is real, from the catalog.
 - The AI never sets prices. Zero hallucination by design.

40% conversation • 60% living canvas

- One synchronized screen: LEFT is the chat, RIGHT fills with what backs up the advice.
 - Journey: Discover → Clarify → Style → Bag → Checkout
- Example: “Style me for a rooftop party” → questions → curated outfit → bag → member discount → order.

Not slideware — it's built and working

- A working A&F 'AI Stylist' concept runs end-to-end today.
 - Customer chat + a brand control plane (back office) to configure it.
- Next slides show the actual working journey (screenshots), then a live demo.

Five steps, every turn

- 1. Understand the goal — occasion, style, budget
- 2. Retrieve matching products from the real catalog (by meaning, not keywords)
- 3. Remember the journey — never repeats, builds on context
- 4. Decide the next best step — ask · recommend · build outfit · quote
- 5. Respond with grounded recommendations + a synced visual canvas

SEE IT IN ACTION

The working A&F journey (1 of 2)

1 · Conversational start

2 · Understands the need (style profile)

3 · Curated outfit from the real catalog

SEE IT IN ACTION

The working A&F journey (2 of 2)

4 · Bag with member discount applied

5 · Completed order (ANF-256237)

One engine, many journeys

Value theme	Use cases	Moves
Sell more	AI Stylist, Complete-the-Look, Trip Packing, Denim Finder	Conversion, AOV, UPT
Lose less	Fit & Size Advisor, Care & Support	Return rate, support cost
Keep them	Member Concierge, Gift Concierge, NL Discovery	Retention, repeat
New revenue	A&F “Luxe” made-to-order	New premium AOV

SPOTLIGHT

Two flagship journeys for A&F

- Denim Fit Finder (your signature): fit, rise, wash, length, “size up in the waist?” → the right jeans.
 - Converts the hardest, highest-consideration category.
- Fit & Size Advisor (the ROI story): body type + fit preference, grounded in your size charts.
 - Attacks the #1 apparel cost: returns.

“BUT ISN'T THIS JUST AGENTIC CHAT?”

Same building block. Different object of attention.

Dimension	ChatGPT / Claude	JourneyAX
Grounds in	Chat history + web	Journey + catalog + rules + profile
Acts via	Text (+ some tools)	Governed commerce tools: outfit, quote, order
Governance	General safety	Business rules, compliance, audit per brand
Success =	A helpful answer	A journey completed / converted
Memory	The thread	Customer + journey, long-term

WHY NOT COPILOT / CLOUD AI?

Those help staff work. JourneyAX helps customers buy.

What matters	Copilot / cloud AI assistant	JourneyAX
Built for	Employee productivity	Customer buying journeys
Knows your products	Only if you build & maintain it	Yes — your live catalog & prices
Completes the sale	No — it answers, you do the work	Yes — styles, quotes, orders
Your brand & rules	Generic assistant voice	Your voice, pricing & rules enforced
Choice of AI vendor	Locked to that vendor	Vendor-neutral — switch anytime

Runs in the cloud you already trust — safely, at scale

- Deploys on AWS, Azure, GCP or your private cloud — standard containers, zero-downtime releases.
- Per-brand data isolation; single sign-on (SSO); personal data protected; auto-scales with demand.
 - Your data stays yours — never used to train anyone's model.

THE DOUBTS EVERY BUYER HAS

Six things you'll want to be sure of

Concern	Short answer
Is our data shared or used to train AI?	No. Your data stays yours, kept apart per brand, never used to train models.
Can we change the AI model later?	Yes, anytime — vendor-neutral, no rebuild, no lock-in.
Will it handle our busy periods?	Auto-scales for peaks and back down when quiet; pay for what you use.
Is it compliant & auditable?	Rules are enforced and every action is logged for a full audit trail.
Can we change the business rules?	Yes — your team edits pricing & rules and publishes. No developer needed.
Will it fit our systems?	Connects to commerce, catalog, CRM and orders via standard connectors.

Three things you control yourself — no code, no waiting

- The AI model — choose or switch vendors anytime.
- The business rules — edit, test, publish (pricing, discounts, compliance).
- The journey — Discover → Style → Quote, configured not coded.

Four measurable levers

- Conversion ↑ — guidance beats browsing
- AOV / UPT ↑ — complete outfits, not single items
- Returns ↓ — right fit, first time
- Loyalty ↑ — member rewards + personalization in-flow
 - Illustrative industry ranges: +20–40% conversion on guided journeys; meaningful AOV lift from bundling.

GETTING STARTED

From 'yes' to live in about 4–6 weeks

- Week 0 — Discover: pick the brand & one journey; agree the goal & success metric.
- Week 1–2 — Configure: load catalog, knowledge, brand voice & rules; connect systems.
- Week 3–4 — Pilot: go live to a small audience; tune from real conversations.
- Week 5–6 — Launch & measure.

Who does what — and what it takes

You bring

- Your product catalog & pricing
- Brand guidelines & tone
- Key docs (specs, policies, FAQs)
- A business owner + access to your systems

We bring

- Pilot: fixed fee — one brand, one journey, 4–6 weeks
- Platform: subscription that scales with usage
- Expansion: per journey / brand — setup, not a rebuild
- The engine, control plane & support

Where the product is heading

- NOW · live: guided buying journeys (discover → style → quote → lead), configurable back office.
- NEXT · 2–3 quarters: full checkout & order end-to-end, plus WhatsApp, kiosk and CSR assist.
- THEN: the brand's own agent, everywhere the customer is.
 - HORIZON: proactive, one-to-one styling at scale.

**A customer goal → JourneyAX guides • grounds •
governs • acts → a completed sale.**

Flexible. Grounded. Governed. Yours.

QUESTIONS YOU'LL BE ASKED

Straight answers, in plain business terms

Question	Answer
"Isn't this just ChatGPT on our site?"	The LLM is one part; the value is orchestration, grounding, governed actions and memory.
"Will it invent products/prices?"	It can't — everything comes from your systems; the AI explains, never invents.
"How is it hosted & secure?"	Your cloud (AWS/Azure/GCP); per-brand isolation, SSO, full audit trail.
"Will it fit our systems?"	Yes — standard connectors to commerce, catalog, CRM and orders.
"How fast to launch?"	Weeks, not months — a new brand is setup, not a rebuild.

The interface of commerce is changing.
Let's own the journey — together.

Next step: pick one pilot journey for A&F.

Where's the biggest impact first — conversion, AOV, returns, or loyalty?
